d3kOS — First-Time Setup Checklist

Complete these steps in order. Each one unlocks the next.

BEFORE YOU START

- ☐ Pi is powered on and the d3kOS dashboard appears on screen
- ☐ You have your **home WiFi name and password** ready
- ☐ You have an **iPhone or Android** phone nearby
- ☐ You are within WiFi range of your home router

STEP 1 — Connect the Pi to the Internet

⚠ **Do this first. Nothing else works without it.**

- ☐ Look at the **taskbar at the bottom** of the Pi screen
- ☐ Click the **network / globe icon**
- ☐ Select your **home WiFi network** from the list
- ☐ Enter your WiFi password and click **Connect**
- ☐ Wait 15–30 seconds — confirm the icon shows connected

Why: The QR code, registration code, and mobile pairing all require the Pi to reach atmyboat.com. A blank QR code or "Network unreachable" error means this step was skipped.

STEP 2 — Run the Setup Wizard

- ☐

Click ← **Dashboard** if not already there, then open **Setup Wizard**

- ☐

  Work through Steps 1–5 (vessel name, engine, units, etc.)

- ☐

  On **Step 6 — Mobile Pairing**: the QR code now appears (internet required)

- ☐

  If QR is blank: click **Retry** — it needs a moment to contact the server

- ☐

  Write down the **short registration code** shown below the QR box

STEP 3 — Create Your AtMyBoat Account & Pair

Option A — Scan the QR code (easiest)

- ☐

  Open your phone camera

- ☐

  Point it at the QR code on the Pi screen

- ☐

  Tap the link that appears — it opens atmyboat.com automatically

- ☐

  Create your free account and the Pi links in one step

Option B — Manual code entry

- ☐

  On your phone, open a browser and go to **atmyboat.com/register**

- ☐

  Create your free account

- ☐

  When asked for a registration code, type the code from Step 2

- ☐

  Submit — pairing completes automatically

STEP 4 — Confirm Pairing

- ☐

  Pi screen updates — "Paired" or your account name appears

- ☐

  On your phone, you can now access the d3kOS companion app at **atmyboat.com/app**

- ☐

  Log in — your Pi shows as connected

STEP 5 — Set Your Gemini AI Key (optional but recommended)

- ☐

  Go to **aistudio.google.com** → sign in → **Get API Key** → **Create API key**

- ☐

  Copy the key (starts with `AIza...`)

- ☐

  On the Pi: **More** → **Settings** → **AI Configuration** → paste the key → Save

IF SOMETHING GOES WRONG

Problem	**Fix**
QR code blank / not appearing	Connect Pi to home WiFi first, then Retry
"Network unreachable" error	Pi is not online — see Step 1
Can't find "More" button	It's the ⋮⋮ button at the far right of the bottom nav bar
Can't find Settings	More → Settings, or type `localhost:3000/settings` in the Pi browser
Can't find Pi ID	Settings → scroll to "AtMyBoat Community & Mobile Pairing" — Pi ID shown
Pi ID vs Support ID	**Pi ID** = for pairing. **Support ID** = diagnostic only, ignore it
Screen size matters should have at least 10.1 screen	When you have a smaller screen d3kOS menu will not display correctly. Contact skipperdon@atmyboat.com for assistance.
VNC — need bigger screen for setup	Connect Pi to WiFi, then use RealVNC Viewer on Mac/PC to reach Pi at its IP:5900

YOUR PI ID (write it down)

Pi ID: _____

Found at: Settings → AtMyBoat Community & Mobile Pairing This ID never changes. Keep it for support calls.

d3kOS by AtMyBoat.com — support: atmyboat.com/contact
